

Instagram User Analytics

Project Description: The aim of this project builds useful insights from metadata using the MySQL workbench. Visualize them to increase their business efficiency.

Approach: The project was executed using SQL, where queries were utilized to create a database from the given raw metadata. Apply SQL queries and analysis with the given questions.

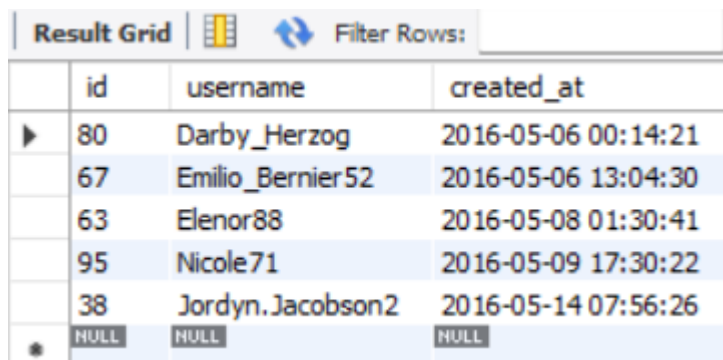

Tech-Stack Used: It included MySQL Workbench v8.0.30.0, which is comfortable for the Instagram User Analysis.

Insights:

A) Marketing Analysis:

1. **Loyal User Reward:** Identify the five oldest users on Instagram from the provided database.

Conclusion: These are the oldest users of Instagram.

The screenshot shows the MySQL Workbench Result Grid interface. At the top, there are tabs for 'Result Grid', a grid icon, and a 'Filter Rows' section with a search icon and a text input field. Below the tabs is a table with four columns: 'id', 'username', and 'created_at'. The table contains six rows. The first five rows represent the oldest users, ordered by their 'created_at' date. The sixth row shows 'NULL' values for all three columns. The rows are highlighted with alternating light blue and white backgrounds.

	id	username	created_at
▶	80	Darby_Herzog	2016-05-06 00:14:21

	95	Nicole71	2016-05-09 17:30:22
	38	Jordyn.Jacobson2	2016-05-14 07:56:26
*	NULL	NULL	NULL

Code:

```
#1 Loyal User Reward :  
select * FROM users  
ORDER BY created_at  
LIMIT 5;
```

2. **Inactive User Engagement:** Identify users who have never posted a single photo on Instagram.

Conclusion: These users were inactive after their first post.

```
# 5 Ad Campaign Launch
select * from users;
select DATE_FORMAT(created_at, '%W') as day ,count(username)
from users group by 1 order by 2 desc;
```

B) Investor Metrics:

- User Engagement:** Calculate the average number of posts per user on Instagram. Also, provide the total number of photos on Instagram divided by the total number of users.

Conclusion:

Result Grid  Filter Rows: <input type="text"/>			
	totalphotos	total_users	photoperuser
▶	257	100	2.5700

Code:

```
# B) 1. User Engagement
select * from photos, users;
with base as (
select u.id as userid,count(p.id) as photoid from users u
left join photos p on p.user_id=u.id group by u.id )
select sum(photoid) as totalphotos,count(userid)
as total_users,sum(photoid)/count(userid) as photoperuser
from base;
```

2. **Bots & Fake Accounts:** Identify users (potential bots) who have liked every single photo on the site, as this is not typically possible for a normal user.

Conclusion:

Result Grid	Filter Rows:
username	likess
Aniya_Hackett	257
Bethany20	257
Duane60	257
Jaclyn81	257
